

Answers for Introduction Worksheet

(The Answers are done to the best on my knowledge)

1. Any of these would be correct: drugs, glass, paint, explosives, and soil.
The second part of this question varies.
2. Any of these would be correct: such as wood and plants
The second part of this question varies.
3. Any of these would be correct: firearms, discharged bullets, cartridge cases, shotgun shells, ammunition and garments.
The second part of this question varies.
4. Any and all photographs taken of the scene before, during and after the investigation
The second part of this question varies.
5. This is an opinion question.
6. The expert is expected to defend vigorously the techniques and conclusions of the analysis, but at the same time there must be no reluctance to impartially discuss those findings that could minimize the significance of the analysis. Any attempt to do so would jeopardize the investigator's credibility. The forensic scientist should not be an advocate of one party's cause, but only and advocate of truth.
7. Evidence Contamination
