

Astronomy Project

Option 1

Pick one country and create a virtual tour of 10 different meteor impact sites.

For each site, include a picture of the crater or blast area. Include a brief description of the site, the date of the event, and an estimate of the amount of energy released.

Be sure to cite the sources of your information.

Option 2

Research 10 different constellations.

For each constellation, draw out the stars that make up the constellation and connect them in the correct pattern. Each constellation diagram must include the names of the stars. Then for each constellation tell what the image makes and describe what that image is. Give a brief account of the origins of the constellation. Be sure to cite your sources.
